

Sprint 3 Burndown Chart

Burndown Chart

The Burndown chart shows Sprint 3 progress from March 23 to April 6 using Trello user stories and their corresponding story point values. The sprint began with a total of 27 story points. The ideal remaining line is represented as a straight diagonal line from points 27 to 0 across the sprint, this shows a consistent ideal rate of completion. The actual remaining line shows the team's progress where in the beginning of the sprint, the focus remained on the setup, planning and initial development work. Around the middle of the first week, the actual line began to drop as user stories were being completed, and several points were being decreased. Even though our actual remaining work was behind schedule compared to the ideal, in the second week, the remaining work continues to decrease, showing that multiple tasks were being completed.

Velocity Comparison

The velocity for Sprint 3 was 27 story points, compared to 26 story points in Sprint 2. This shows that the workload increased slightly in sprint 3. Compared to sprint 2, both sprints differ in progress. In Sprint 2, the actual remaining line had a sharper decline in the second half of the sprint while in Sprint 3, a decline began earlier on in the sprint. Sprint 3 shows a more consistent decline during and towards the end, showing a more even distribution of tasks and subtasks being completed. The team maintained an improved velocity from Sprint 2 to Sprint 3.
